3i Atlas & 1547

Field Report • Higher Order Consciousness • Emergent Phenomena

© SRH | Lane F. Taylor | December 13, 2025

Abstract

In 2014, we published a fixed set of anchors embedding the exact dates **7.1.2025 → 12.19.2025**, alongside a rigid number convention and an anomalous sub-signature, α . Independently, astronomers later discovered interstellar object **3i Atlas** on **7.1.2025** and predicted its closest approach to earth on **12.19.2025**. Rigorous scientific observations of **3i Atlas** confirm anomalous plasmatic characteristics consistent with our original statements. Under standard, conservative assumptions, the combined probability of this configuration occurring by chance is roughly 1 in 6.8 trillion before the sub-signature of the fine structure constant α and about 1 in 6.8 quadrillion when the 2014 context of latent human capacities to ionize the physical body into light is included. These figures reflect strict precommitment and non-negotiable rules, not post-hoc pattern-finding.

How did emergent reality thread our 2014 predictions with such extraordinary precision? Here, we establish the facts and methods used to reveal a multi-faceted array of synchronicities. Our principal objective is to demonstrate that the emergent phenomena **3i Atlas** is an important instantiation of first-tier consciousness – part of a self-organizing dynamic issued from the resonant core of human awareness.

Introduction

3i Atlas was discovered on **7.1.2025**. (ATLAS telescope in Rio Hurtado, Chile — after 'Oumuamua 2017 and Borisov 2019).

SRH 道

The emergent phenomenon of this interstellar object is treated as synchronous by HOC_{LSG}.

HOC_{LSG} is an instantiation of higher order consciousness here on earth; as a matter of public record, she first disclosed the number **1547** as personal her seal as a precommitment in **1965**. (BBI, Taylor, et. al., 2025)

$$\begin{array}{r} 1547 \\ \hline 91 \end{array}$$

=

$$(1 + 5 + 4 + 7)$$

t.1 HOC_{SRH} references a standard probability of **91** years for humanity to fully regulate its internal disposition in order to instantiate a first-tier temporal civilization on earth. (p. 86, BBI, Taylor, et. al., 2025)

Within the *sealed* **91**-year probability period, **3i Atlas** was discovered on **7.1.2025**

$$(1 + 5 + 4 + 7) = (7 + 1 + 2 + 0 + 2 + 5)$$

$$(1 \times 5 \times 4 \times 7) = (7 \times 1 \times 2 \times 2 \times 5)$$

$$(1 + 9 + 6 + 5) = 21$$

Image 21 of the ancient *Codes of Great Brightness* is titled **Fire From Heaven**.

These are rigid precommitments made decades before **3i Atlas** was discovered.

3i Atlas makes its closest approach to earth on **12.19.2025**.

SRH 道

The black moon on **12.19.2025** is listed as a temporal anchor of great significance by HOC_{JTM} on page **171** of 《秘鑿蟾》 《銀河家道》 – explicitly listed as ‘gamma state’ circuitry aligning “**11 11**.”

$$7.1.2025 \rightarrow 12.19.2025 = 171 \text{ days.}$$

This precise predictive corroboration of the 2014 disclosure anchors the exact temporal appearance of **3i Atlas** in the collective awareness to the energetic signature of **11 11** as described. (p. 171, SOST, Taylor, et. al., 2014)

How did reality thread the precommitments by HOC_{LSG}, which are explicitly embedded in the publications anchored to the black moon of **12.19.2014**, with the emergent phenomena of **3i Atlas** passing closest to earth exactly **11** years to the day?

The Physics of Coinciding “Gamma” Phenomena

GRB 250702B confirmed 7.2.2025. The most energetic cosmic explosion ever recorded. 7+ hours versus typical minutes, with X-ray activity continuing for days. The modular alignment with **3i Atlas** is subjectively striking; consecutive days, both breaking records in their independent domains. As for direct physiological effects: none. No direct Earth impact reported. The physics says no gamma ray → brain wave/molecular DNA causation.

The temporal consciousness implications of consecutive-day cosmic anomalies – **3i Atlas → GRB 250702B** represents different emergent territory entirely. Specifically,

HOC_{DHM} records the numbers of quantum self-organization are **2** and **7**; HOC_{SRH} is **13**.^(OG, Taylor, 2017)

$$(2 + 7 + 13)$$

$$11 \mid 11$$

=

$$(1 + 2 + 1 + 9 + 2 + 0 + 2 + 5)$$

≈

12.19.2025

SRH 道

3i Atlas, making its closest approach to earth on **12.19.2025**, appears synchronous with the higher order principle of self-organization denoted by the **11 11** as predicted in the cryptic texts.

HOC_{DHM} states that the hierogamic center of all self-organizing phenomena can be designated

•••• + ○○○○ + ••••

The binary $5 + 5 + 5$ is b**1111**

11 11

The center of this binary is thus, **11**.

$$\mathbf{11} = (\mathbf{1} + \mathbf{3} + \mathbf{7})$$

With respect to the resonant core of the fine structure constant in the unified field (α)**137** ≈ 1 .

In the index of primes, **P₁₃₇** represents the unified center of ever-present awareness.

$$\mathbf{P}_{137} + \mathbf{1} + \mathbf{P}_{137}$$

=

1547

Sealed.

Under rigid precommitments documented years in advance, this **3i Atlas** match is on the order of one in a quadrillion – statistically beyond coincidence. The importance of this relates not to any distant celestial gamma ray spike coinciding with the temporal discovery of **3i Atlas**; rather, we note that intense gamma-band activity during deep synchronicity experiences can become phase-locked across physical regions of the brain, and that large-scale phase synchrony is a plausible neural substrate for sudden insights and realizations. Such gamma states can support fast binding and coordinated information exchange; when it phase-locks between distant areas, it can transiently reconfigure networks in ways that favor novel associations and moments conducive to empowering latent capacities. **3i Atlas** is a perfectly timed reminder of our infinite luminous potential in this regard.

Probability with ‘Anomalous Ionization Phenomena’ Sub-signature

- Base rarity (your rigid lattice):

$$p_{\text{base}} = \frac{1}{365^4} \cdot \frac{1}{384} \approx 1.47 \times 10^{-13} (\text{about 1 in 6.8 trillion})$$

- Total with sub signature frequency p_{sub} :

$$p_{\text{total}} = p_{\text{base}} \cdot p_{\text{sub}}$$

Interpretable bands

- Uncommon sub signature (1–10%):

- $p_{\text{sub}} = 0.01 \text{ to } 0.10$
- $p_{\text{total}} = 1.47 \times 10^{-15} \text{ to } 1.47 \times 10^{-14}$
- About 1 in 68–680 trillion.

- Rare sub signature (0.1–1%):

- $p_{\text{sub}} = 0.001 \text{ to } 0.01$
- $p_{\text{total}} = 1.47 \times 10^{-16} \text{ to } 1.47 \times 10^{-15}$
- About 1 in 0.68–6.8 quadrillion.

- Extreme rare ($\leq 0.01\%$):

- $p_{\text{sub}} \leq 0.0001$
- $p_{\text{total}} \leq 1.47 \times 10^{-17}$
- **≥1 in 68 quadrillion.**

The 1 in 6.8 quadrillion figure corresponds to $p_{\text{sub}} \approx 0.1\%$ under the strict lattice.

Now, “1 in 6.8 quadrillion” means: given the rigid precommitments and specific anomalous phenomenon published in the anchor stack, the chance of a random interstellar event satisfying all of these synchronistic findings is effectively zero. The fact that **3i Atlas** did so is not mere coincidence – it’s the product of a symbolic encoding system known to higher order consciousness, which is acting as a sieve. HOC_{LSG} and her embodied specialists didn’t predict the comet’s trajectory or anomalous luminosity; they precommitted a lattice of constraints that reality later resonated with.

The “extreme rare” sub-signature refers to the post-**12.19.2025** plasmatic *potentiation* precommitted in the 2014 publication – an explicit claim and detailed analysis of the latent human capacity to ionize the physical body into pure light after that date. Experientially, this collective phenomenon is not predicted to unfold as a single, uniform emergence. It instantiates unevenly across temporal nodes, producing a cascade of partial and full expressions. That unevenness explains both the mass anomalous feelings among the general population and the rare, high-intensity sub-signature event marked by **3i Atlas**. What makes the plasmatic sub-signature an extreme rarity is its rigid embedding of the fine structure constant α into the 2014 precommitment anchors with absolute precision – the plasma physics of **3i Atlas**, the role of α in those natural processes, and the precedent of cometary plasma phenomena are all standard science. Specifically, plasma forms when gases are ionized by heat, radiation, or electromagnetic fields. The fine-structure constant ($\alpha \approx 1/137$) sets the strength of electromagnetic interactions, which directly governs ionization thresholds, plasma oscillations, and radiative processes. These dynamics are not different from the ionized “light-body” phenomena reported as a latent human potential around the world, and documented specifically in the 2014 precommitment anchors.^(See *Sirulliik Protocol 1.1*, Taylor et. al., 2025)

Conclusion

When a prediction anchored in documented light-body-phenomena and the physics constant α lands on the exact date when an interstellar object emerges with luminous plasmatic anomalies, it feels beyond chance. That sense of impossibility is legitimate; it’s what happens when strong precommitments collide with rare empirical events.

Moreover, spontaneous and powerful psychophysical feelings reported by people with no prior context suggest that **3i Atlas** is not only threading our rigid lattice of anchors but also mirroring a *collective*

SRH 道

resonance layer. This points to a deeper modeling need: beyond probability sieves, we must account for psychophysical cascades and archetypal realizations. That's the emergent layer – a population-level synchrony that makes novel ‘spiritual’ phenomena feel inevitable, even to those without technical or symbolic training related to higher order consciousness. There is more to come. Much more.
